

# THE PERIMETER HEATING COMPANY

AIR CURTAIN PRODUCT BROCHURE

The Perimeter Heating Company's range of air curtains are a high performance, energy efficient solution, ideally suited for use in offices, retail outlets, manufacturing facilities, reception areas and warehouses. Standard, Architectural and Recessed models are available in ambient, hot water or electric options.

Custom units can also be manufactured to customer requirements, for mounting above revolving doors and within bulkheads etc. Contact our office to discuss your bespoke design.

## Standard Models

Our standard over door air curtains are a powerful range of modular air curtains, built to a high quality with a modern angular design. Suitable for pedestrian doorways up to a height of 2.7metres and a width of 2 metres.

Easy to install and service this low cost and continuously rated unit meets with specifier and end user needs.

Finished in a high-quality polyester powder coat to RAL 9010, (Other colours available on request).

The Ambient version of this model is often utilised to protect food preparation areas, chill rooms, food ripening areas and warehouses against insects from entering food storage/preparation areas and the ingress of warm air into temperature controlled zones.

## Architectural Models

Our architectural air curtains meet architects' requirements for neat, unobtrusive, efficient installations. Supplied in either mirror polished or brushed stainless steel, or colour coded to most RAL colours. The stylish softened lines of this unit will fit in well with any contemporary interior.

The addition of a vertically mounted option alongside the traditional over door unit allows for installation of units where slimline structures cannot bear the weight of a traditional unit or a traditional unit will interfere with minimalist building designs or period features.

## Recessed Models

Our recessed air curtains use the same high-quality components as our standard and high duty models. They are specifically designed to fit into small recessed ceiling areas having a depth of only 250mm (300mm on high duty model).

Supplied with a drop down hinged, linear grille for ease of installation and servicing. This compact recessed range for ceiling heights up to 3.7 metres is suitable when an unobtrusive air curtain is required.

The linear grille is finished in a high-quality polyester powder coat to RAL 9010, (Other colours available on request).

## Industrial Models

Our Industrial air curtains are of an aesthetically pleasing modular design, suitable for apertures of up to 6 metres in height, ideally suited for large cold stores, loading bays and roller shutter access doors.

Available as Ambient, Electrically heated, LPHW, MTHW, Super-Heated Water and Steam models.

*Please contact the office for quotes/technical information on this product.*

## High Duty Models

Standard, Architectural and Recessed models are also available in a slightly larger high duty option for mounting up to 3.7 metres high or for areas with substantial heating requirements.

*Refer to page 5 for technical details.*

# Controls & Wiring

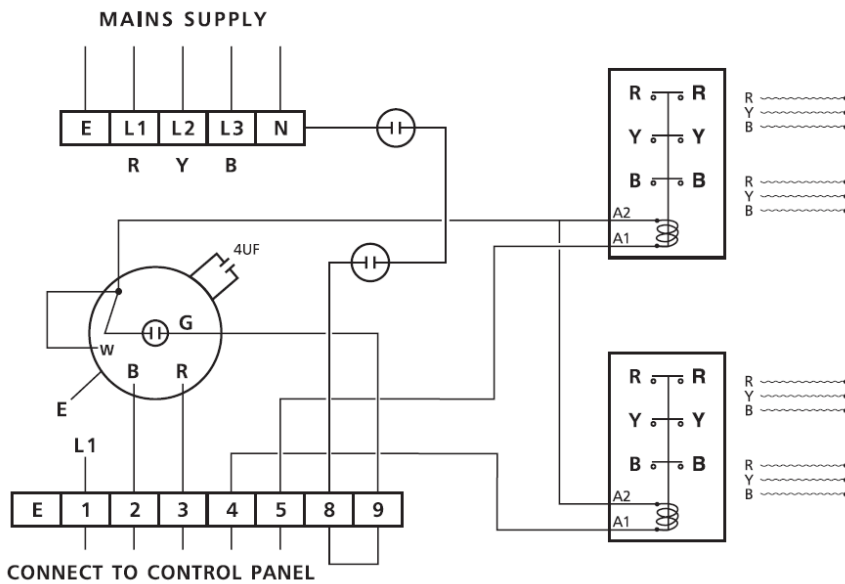

Air curtains are supplied with remote control panels as standard and can be flush or wall mounted. Ambient and water heated units have a three position switch for fan speed only (Low/Off/High). Electrically heated units are supplied with an extra three position switch for the heating element (Off/Low/High). Each control panel can be used to control single or multiple units.

## Additional Controls

Thermostatic and valve controls, door switches and BMS volt free contacts (enable/disable/fault). All available on request.
